

JARE Airline Training Partnership Mock-up Cabins & Check-in Areas 2024

At J.A.R.E. Airline Training Partnership we have an unrivalled experience, over 34 years, of building mock-up cabins and check-in areas as well as providing airline, airport and aviation support equipment which has been successfully used in over 200 colleges, universities, schools and aviation training centres across the UK and Overseas.

ALSO WE UPGRADE, REFRESH AND MAINTAIN EXISTING MOCK-UP CABINS!

We offer a range of full mock-ups like the stunning example below (just a few others are featured later from our extensive range) as well a range of cut-away, midi and half mock-up cabins **+ our *UNIQUE Starter options*** & check-in areas with alternatives to match a college's specific budget, space & other considerations. ***If you have the will to consider a mock-up cabin we will find a way for it to become a reality sooner than you think!***

Our Mock-up Cabin prices range from
£12,500 to over £125,000 – we can
always match something to your
budget, adding on items later if required

We can build you a range of Mock-up cabin options which are shown on the following pages – just ask us for your specific requirements. Cut-away, Half & Midi options are also listed.

These are just a few examples of the many options we can offer; we can also offer a range of electronics to recreate a range of emergency and service simulations to replicate active aircraft cabin environments i.e. active PSUs, interphones, touch screen control panel and many more options via our unique **Forward Attendant Panel** controlled PLC system.

Examples of a Cut-away + Full & Half Mock-up Cabins & Check-in Areas

Example of a Cut-away four row mock-up cabin within a classroom – one option includes a rear full width galley, FAP/HMI system, full electronics, PSUs and Exit/ACP indication + lighting

Example of a larger mock-up across a narrow classroom to create a full mock-up feel

A Half Mock-up cabin with two class seating – with flight deck and door images

A range of Mock-up Cabin starter options

One college went from the image on the left to start with and then a few years later we installed this cut-away on the right hand side, utilising the original seating

Starter options with seating, small galley, jumpseat & interactive PA/Interphone; starter electronics can also be installed

Refurbishment & upgrade – this mock-up on the left was very worn, damaged and was totally lacking in any interactive features AND in a very sorry state of disrepair, in fact unusable – but look at it now on the right!

Modern seating, interactive electronic features, PA/Interphone & up-to-date lighting

Air Cabin Crew SIMULATORS

For SEP type training we have a range of realistic SIMS

Galley Oven FIRE SIM

Door Trainer SIM

NOTE: FIRE SIMS use RC BCFs (weighted to 1.5kg), smoke, lighting and realistic sound effects simulating a cabin fire – they are popular for Cabin Crew training and very realistic

Smoke-filled Cabin/Decompression SIM

LAV/Toilet FIRE SIM

NOTE: These FIRE SIMS can be used for Locker and other Cabin Fire SIM options where required

Check-in Area examples

Examples of both single desk and double desk check-in options

An example of a double check-in area and two types of Security Arch (AMD)

These are just some of the 138 Mock-up cabin & Check-in Area examples we have built over the last 34 years. *All our work is quality assured via our longstanding ISO 9001:2015 accreditation.*

We can also install in all our mock-ups an interactive touch-screen PLC system which can also be remotely controlled by a Tutor via a wi-fi enabled tablet device, PC or Laptop etc., to activate and/or simulate a whole range of cabin scenarios for interactive student teaching which is very flexible. The system represents the latest aircraft technology to be found on aircraft such as the Boeing B787 Dreamliner for example.

A range of tasks can be achieved on the multi-page Touch-screen FAP system including:-

Controlling the sound system

Controlling the Passenger Service Units inc: Call Bells, No Smoking, Fasten Seat Belts and Reading lights + alerts and re-setting

Controlling the lighting (if any) including the ability to dim LED lights

Controlling a range of sound effects including in-flight, emergency scenarios, call bells

Controlling the Interphone handsets and PA via the handsets

Controlling any pathway marking or emergency exits signs

Additionally a range of extra bespoke options can also be built into our Touch-screen electronic systems

For more information, ideas and help with your own specific mock-up cabin and/or check-in area, starter mock-up, refurbishment or upgrade of a mock-up requirement, please contact:
